[www.waves.com](http://www.waves.com)
Introduction

The DiGiGrid IOX is a high-quality digitally controlled audio I/O for SoundGrid systems. It delivers high-resolution recording and monitoring, whether you’re performing in the studio, listening in the control room, playing onstage, or mixing the FOH. IOX has twelve mic/line inputs, six line outputs, and four independently adjustable headphone outputs. This super-low-latency I/O is ASIO/Core Audio compatible.

SoundGrid is the Waves high-speed networking protocol for moving audio, clock, and other information between a host system and I/O devices—and between I/O devices themselves. A SoundGrid host manages the network and assigns servers and I/O devices to mix, process, and record, depending on the host. All SoundGrid devices connect to the host with standard Ethernet cable.

SoundGrid is scalable. Connect one I/O device to a DAW and you have a high-quality sound card. Add more I/Os and your system becomes more flexible and powerful. Depending on the host application, a SoundGrid host can assign up to sixteen I/O devices. Complete SoundGrid systems can be networked together to share devices.

Add a server to a SoundGrid system to offload plugin processing from the host CPU to a SoundGrid DSP server. This dramatically increases processing power and enables greater plugin counts—it also provides very low system latency.
Hardware and Connections

IOX is a 1U rack-mounted device. Aside from headphone jacks, all connections are on the rear panel. There are twelve Mic/Line input connections, six line output connections, word clock and Ethernet I/O.

**IOX FRONT PANEL**

1. Input clipping  Red = Clipping (level can be set through the control panel)
2. Input signal present Green = Signal present
3. 48V phantom power Orange = Phantom On
4. Network status indicator
   - Blue: the device is recognized by the SoundGrid network.
   - Red: the device is not recognized by the SoundGrid network
   - Yellow: updating
   - White: unit malfunction (e.g., firmware did not load properly, unit did not boot properly).
   - Cycling through colors: used to identify the unit from the device rack or control panel.
5. Power switch/indicator
6. Four ¼" TRS headphone jacks with individual volume control knobs,(range: 8 to 600 ohms; gain: Off to +15 dB)
IOX REAR PANEL

1. Mains input: 90VAC–240 VAC 50/60 Hz
2. Built-in 1GB Ethernet switch, two ports
   The two-port Ethernet switch can connect IOX directly to a host computer and one other device without an external Ethernet switch. For larger systems, a 1GB SoundGrid-approved Ethernet switch is necessary. It is not important which of the Ethernet ports is used to connect to the SoundGrid network.
3. Recovery/reset button
4. Clock in and out (BNC connectors for external Word Clock)
5. 12 mic/line inputs (combo XLR/TRS connectors)
6. 6 line out ¼” TRS connectors
Getting Started

Configure SoundGrid and assign your devices as follows, however large or small your system.

A Connect the hardware
B Install the software
C Configure your system

A Connect the Hardware

One I/O

In this example, one DiGiGrid IOX is connected directly to the SoundGrid host computer using a Cat 5e Ethernet cable or better. The SoundGrid ASIO/Core Audio driver is used for plugin processing and/or DAW playback/recording.

The LAN port that’s connected to the SoundGrid network should be used for SoundGrid only. Do not share this port with the internet or other networks.

In this configuration, all plugin processing is carried out on the host computer. The speed and power of the host determines overall latency.
Add I/Os

Adding I/O devices not only increases the number of I/O channels, but lets you have separate devices for stage and FOH, or live room and control room. Use a "star" network configuration with a 1GB Ethernet switch to connect SoundGrid devices. Only use switches tested and approved by Waves.

![Diagram of network connection]

1. Host computer
2. I/O devices
3. 1GB Ethernet switch

See [this support article](#) for a list of supported switches.

You can connect and assign up to 16 SoundGrid I/O devices to the network, depending on the SoundGrid host application. All SoundGrid I/O devices, hosts, and servers are connected through the Ethernet switch. You can also add more computers to enable audio streaming among hosts.

ADD A SERVER

To add a server to your SoundGrid system, just connect it to the Ethernet switch and configure it in your host application. This moves all DSP processing from the host computer to the server, which provides a higher plugin count and enables the eMotion LV1 and eMotion ST mixers. Visit the waves.com hardware pages to learn more about SoundGrid servers. Consult your SoundGrid host application’s user guide to learn about using servers.

Consult your host application user guide to learn how to configure additional I/Os and servers.
Download and Install Software

Installing a New SoundGrid Host System
Installing the Waves SoundGrid host application will also install the SoundGrid ASIO/Core Audio driver and applicable device drivers. Your devices will appear in the Inventory of your host system. If a device is not visible in the Inventory, you may need to install a specific driver from Waves Central—please see below. First, however, check the device’s connections and power.

Adding an I/O Device to an Existing SoundGrid Host System
If you are already using a Waves SoundGrid host application and your device does not appear in the Network Devices list, use Waves Central to update the host application, which also updates the device drivers—or install just the missing device driver from Waves Central.¹

Waves Central
All Waves software is downloaded and installed via the Waves Central application. To install a specific device driver, launch Waves Central and follow these steps:

1. Choose All Products
2. Search for the driver by name
3. Choose the driver and click Install

If you are new to Waves products, begin by downloading the Waves Central installer from the Waves Download Page. See the Waves Central User Guide for instructions on how to install drivers, plugins, and applications.

Licenses
You do not need a license to use this device. However, many hosts or specific host configurations do require a license. Refer to your host’s product page for details.

¹ The SoundGrid QRec host is installed with any I/O.
Configure the System

A SoundGrid network is configured and devices are assigned in a host’s Setup window. At the heart of this window are racks where devices are assigned. Any compatible device that’s part of the host’s SoundGrid network will be available for assignment. This collection of devices is called the Inventory. Setup is similar with all hosts: identify the host’s LAN port, select a device slot, and use the drop-down menu to choose an available device.

Please consult the user guide of your host application for specific instructions.

All SoundGrid devices are configured in a similar manner. Throughout this section, we show DiGiGrid IOS as an example.
Manual Device Configuration

You can assign, remove, and manage a device manually. Click on the plus or arrow symbol in a device slot to open the Device Menu, then select a device.

Any device not already used will be available for assignment. If no other devices are assigned, the current device will become your clock master. Drivers and servers are assigned in the same manner.

See the user guide of your host system for specific instructions on device assignment and I/O channel patching.

Automatic Device Configuration

Certain SoundGrid hosts—including SoundGrid Studio, eMotion LV1 or SuperRack SoundGrid—offer an Auto-Config tool. Once your devices are connected and powered up, click Auto Config to begin the configuration.

Auto-Config chooses the correct LAN port on the host computer and scans the SoundGrid network for devices. It then patches the devices to the host. We recommend that you let Auto-Config take care of things, at least when you are getting started. If later you add, remove, or swap a device, Auto-Config will reconfigure your inventory and re-patch.

Note that SoundGrid Studio assigns the SoundGrid driver automatically. SuperRack SoundGrid and eMotion LV1 require that the SoundGrid ASIO/Core Audio driver is assigned manually.
Device Firmware

An I/O that is using outdated or incompatible firmware will not work properly in a SoundGrid network until its firmware is updated. The color of the FW button in a device slot indicates the current firmware status.

<table>
<thead>
<tr>
<th>Color</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grey</td>
<td>Compatible firmware</td>
</tr>
<tr>
<td>Blue</td>
<td>Compatible firmware, but a newer version exists</td>
</tr>
<tr>
<td>Red</td>
<td>Firmware not compatible and must be updated in order to use</td>
</tr>
</tbody>
</table>

If a device requires updated firmware, click on the FW button to start a hardware scan. Do not disconnect the device or turn off the computer before **Done** appears. Once the update is ready, turn the device off and on to reset.

Identify a Device

Click on the ID button to activate a hard-to-miss LED on the panel of the corresponding hardware device. You can also activate the LED from the top bar of the device’s control panel.
IOX Control Panel

There are two ways to open the device control panel:

FROM THE DEVICE RACK

Click on the Gear button on a device in the rack slot.

FROM THE DRIVER CONTROL PANEL

Open the driver control panel and then click the Hardware Control Panel button. The driver control panel is located here in the host computer:

PC: C:\Program Files (x86)\Waves\SoundGrid\Driver Control Panel
Mac: System HD/Applications/Waves/SoundGrid

CONTROL PANEL PAGES

The About and System Info pages provide information about the unit, such as MAC address, SOE master MAC Address, firmware version, and more. The Clock and Controls pages are used to set up and manage the IOC.
Controls Page

This is where you configure the inputs and outputs of the IOX. Mic preamps, line inputs and outputs, digital I/O, level control and metering.

The Controls page is divided into three sections:

1. Top Bar
2. Analog section
3. Focus section: input and output levels and 48V phantom power for selected I/O channel are controlled here.
ANALOG SECTION

There are twelve mic preamp and line inputs and six line outputs. Each preamp channel is represented by a button that turns the channel on or off. Each channel has a meter and a clip indicator. Select a channel and it will appear in the Focus section, where preamp parameters are controlled.

Use the Focus section on the left side to adjust preamp levels and turn the 48V phantom on and off. The long meters range from -80 dBFS to 0 dBFS.

- Mic/Line knob gain range: 0 dB to +52.5 dB in 7.5 dB steps
- Fine knob digital gain range: 0 dB to +7 dB in 0.5 dB steps

A clip indicator holds for two seconds or for as long as clipping persists. Peak hold persists until you reset it by clicking on the indicator or switching to a different input.

An orange light on a channel button indicates that phantom power for that channel is active. This status is also shown in the Focus section.
**REMOTE PREAMP CONTROL**

You can control input preamp functions directly from the channel strip of SoundGrid applications, including eMotion LV1 and eMotion ST mixers, and SuperRack SoundGrid.

<table>
<thead>
<tr>
<th>Control</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>48V Phantom</td>
<td>On or Off</td>
</tr>
<tr>
<td>Preamp Gain Input</td>
<td>Controls analog gain in an assigned I/O device that includes a controllable preamp.</td>
</tr>
<tr>
<td>Input Polarity</td>
<td>Mono channels have one polarity reverse button; stereo channels have two. Buttons are latching and are colored green when polarity is reversed.</td>
</tr>
<tr>
<td>Digital Input Trim</td>
<td>Controls input level from digital sources. Separate controls for L/R when input is stereo.</td>
</tr>
</tbody>
</table>

This allows you to control preamps “on the fly,” without leaving your monitor mixer. Refer to your host application’s user guide for details.

**ANALOG OUTPUT CONTROLS**

In addition to meters and clip and peak indicators—which are identical to those in the input controls—there is a Headroom switch that provides a -10 dB pad.

A green LED indicates a -10 dB pad on the analog output.
**CLIP INDICATION AND SMALL METERS**

Clip Indication Threshold sets the level where clipping is shown on the meter in the Focus section. The threshold can be set to 0 dB, -1 dB, -2 dB, or -3 dB. This setting is global: it affects level indication for all channels, inputs and outputs.

![clip indication threshold](image)

Each channel button—analog or digital, input, or output—has a small level meter that indicates when signal is present and provides a rough idea of level. A red light on the channel button indicates clipping.

![analog section](image)

Headphone output levels are indicated in the same manner.

**DIGITAL SECTION**

Digital inputs and outputs can be switched on or off and controlled in the Focus section in the same manner as the analog.
Clock Page

Use the Clock page to set the clock source and sample rate for the device and to assess clock status.

**SOURCE** sets the requested clock source.

<table>
<thead>
<tr>
<th>Source</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal</td>
<td>The device itself provides the SEO clock.</td>
</tr>
<tr>
<td>External WC</td>
<td>Clock is provided by an external device via the Word Clock Input connector.</td>
</tr>
<tr>
<td>Sync over Ethernet</td>
<td>The device receives clock from the SoundGrid network.</td>
</tr>
</tbody>
</table>
**SAMPLE RATE** sets the sample rate when Clock Source is set to Internal. Range: 44.1 / 48 / 88.2 / 96 kHz.

If the device is the network (SOE) clock master, as determined in the Device Racks of the SoundGrid host, then this setting determines the sample rate of the SoundGrid network.

If Clock Source is set to an external clock source, you cannot change the sample rate from the host. The Sample Rate menu is grayed out and inoperative.

**CLOCK STATUS INDICATORS**

Three windows on the right side of the Clock control panel help you to quickly assess the network status of the device.

<table>
<thead>
<tr>
<th>Status</th>
<th>Reports the presence or absence of sync between the IOX and the SoundGrid network.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current Clock Source</td>
<td>Displays the current sync method. This may differ from the choice made in the Source menu.</td>
</tr>
<tr>
<td>SOE</td>
<td>Indicates whether this IOX is the master or a slave in the SoundGrid network. This mirrors the status information in the SoundGrid Studio Device Rack</td>
</tr>
</tbody>
</table>

When the device is a slave in the SoundGrid network, you will likely sync it to the SoundGrid network clock (via SOE).

Even when the device is an SOE slave, you can lock it to an external clock source. For example, if another SoundGrid I/O device is the SOE master and is locked to a word clock device, you may choose to receive clock from the same external device over word clock from the master device rather than via network SOE.

If the device is clocked to external source and that clock source fails, the device will seek an alternate source of clock, in this priority: word clock, Digital 1, Digital 2, and then SOE. If this fails, the device will fall back to Internal.
System Info Page and About Page

The **About** page contains a description of the device. The **System Info** page contains technical details about the device, including MAC address, firmware version, and module version. This information is useful for troubleshooting. Please have this information handy if you contact Waves technical support concerning the device.
Presets

The Top Bar is used to load and save device presets and to identify device hardware.

You can save and load presets of device settings. A saved preset includes all Clock and Control panels parameters. Save IOX presets to use on future sessions or copy them to another computer to duplicate a configuration.

Click the **Identify** button to indicate which IOX hardware device belongs to this Control Panel. Clicking the button causes the Network LED on the front panel of the IOX to flash in a rather psychedelic manner.
Using an I/O Device with a DAW

Setting up SoundGrid devices with a DAW involves these steps:

**PATCH THE I/O DEVICE AND THE SOUNDGRID ASIO/CORE AUDIO DRIVER**

When using a DAW on a SoundGrid network, the SoundGrid ASIO/Core Audio driver serves as a bridge between the I/O device and the DAW. It enables the I/O to communicate with the DAW, and it provides patches. Patching an I/O to the SoundGrid ASIO/Core Audio driver differs slightly among hosts. When you use a host's Auto-Config tool, the host input channels are patched automatically, in an order based on rack. The order of the devices in the Device Rack determines the default patching order. Please refer to your SoundGrid host's user guide for details.

**CONFIGURE THE DAW FOR SOUNDGRID**

1. Set the DAW playback engine to “Waves SoundGrid.” The SoundGrid driver channels will now appear in the DAW I/O preferences and in the Input/Output selector in each DAW channel.
2. Route the DAW inputs and outputs to SoundGrid.
Specifications

**XLR Input**

Input Gain
Adjustable from 0 dB to 60 dB, in steps of 1 dB

*Frequency Response:*
- +0/-0.2 dB 16 Hz to 21 kHz @ 48 kHz sample rate (+4 dBu input @ +20 dB gain)
- +0/-0.2 dB, 17 Hz to 40 kHz @ 96 kHz sample rate

Dynamic Range: (measured bandwidth limited 20 Hz - 20 kHz) 110 dB Gain = 0
- EIN (Gain 60, 150 Ohms) -128.7 dBu A weighted
- THD+N (measured at 1 kHz @ +4 dBu, Gain = +20) 0.0019%

Phase Response:
+/- 10 Deg 20 Hz to 20 kHz

Input impedance: 2k ohm

48V phantom power available

**TRS Input**

Input Gain:
Adjustable from 0 to 60 dB, in steps of 1 dB

*Frequency Response:*
- +0/-0.2 dB 16 Hz to 21 kHz @ 48 kHz sample rate (+4 dBu input @ +20 dB gain)
- +0/-0.2 dB 17 Hz to 40 kHz @ 96 kHz sample rate

Dynamic Range: (measured bandwidth limited 20 Hz to 20 kHz) 110 dB Gain = 0
- EIN (Gain 60, 150 Ohms) -128.7 dBu A weighted
- THD+N (measured at 1 kHz @ +4 dBu, Gain = +20) 0.0019%

Phase Response:
+/- 10 Deg 20 Hz to 20 kHz

Input impedance: 2 k ohm
XLR Balanced Outputs

Selectable maximum output level: +18 dBu or + 24 dBu

Frequency Response:
+0/-0.2 dB 15 Hz to 22 kHz @ 48kHz sample rate
+0/-0.2 dB 17 Hz to 40 kHz @ 96kHz sample rate

Dynamic Range: (Measured bandwidth limited 20 Hz to 20 kHz) 110 dB Gain = 0
EIN (Gain 60, 150 ohms) -128.7 dBu A weighted
THD+N (measured at 1 kHz, Gain = 0) 0.0015%

Phase Response:
+/- 10 Deg 20 Hz to 20 kHz

Output impedance: -40 ohm

Headphones output
1 watt per channel into 32 ohm headphones

Digital I/O

AES-3, AES-EBU Stereo Output. Output sample rate 44.1kHz to 96Khz
Word clock input: Standard 5 Volt square wave. 50% duty cycle
Word clock output: 1X sample rate Standard 5 Volt square wave, 50% duty cycle
Word clock Input: 1X sample rates of 44.1 kHz, 48 kHz, 88.2 kHz and 96 kHz

Power

Universal input power supply 100VAC-240VAC, 50Hz / 60Hz, 1.0 amp

Specifications are subject to change without notice
Resetting the Unit

If an unsuccessful firmware update results in the device no longer being recognized by the host, follow these steps to reset the unit:

1. Turn off the unit.
2. Press and hold the Reset button.
3. Restart the unit while holding the button.
4. Release the Reset button once the device has fully booted.

The unit is now in “force update” mode and a new firmware update can be performed.
