1. Channel faders

The eight 100mm motorized faders are generally used for controlling channel volume. They are all touch sensitive to allow override automation the moment you touch a fader. Also, they are motorized; they will automatically move to reflect the current level of the selected channels in your LV1.

2. Master fader

This 100mm motorized fader operates the same as the other 8 faders. It can be assigned to any mixer channel.

3. Knobs

The eight rotary encoder knobs are generally used for controlling the track pan position, aux send levels, and EQ and dynamics plugin parameters.

4. Channel control buttons

REC buttons - currently not implemented.

SOLO buttons - Turn on and off the solo/cue state of the associated channel. The switch lights red when the channel solo or cue state is on and other channels are muted.

MUTE buttons - Activate and deactivate the mute state of the associated channel. The switch will light red when the channel is muted.

SEL buttons - Select the associated channel for processing control. A channel does not need to be selected to use its fader or to activate mute or solo.
