Chapter 1 – Introduction

1.1 Welcome

Thank you for choosing Waves! In order to get the most out of your new Waves plugin, please take a moment to read this user guide.

To install software and manage your licenses, you need to have a free Waves account. Sign up at [www.waves.com](http://www.waves.com). With a Waves account you can keep track of your products, renew your Waves Update Plan, participate in bonus programs, and keep up to date with important information.

We suggest that you become familiar with the Waves Support pages: [www.waves.com/support](http://www.waves.com/support). There are technical articles about installation, troubleshooting, specifications, and more. Plus, you’ll find company contact information and Waves Support news.

1.2 Product Overview

The Waves Signature Series is our exclusive line of application-specific audio processors, created in collaboration with the world’s top producers, engineers, and mixing engineers. Every Signature Series plug-in has been precision-crafted to capture the artist’s distinct sound and production style. For experienced and aspiring audio professionals alike, the Waves Signature Series allows you to dial up the sound you’re looking for quickly, without interrupting the creative flow.

The JJP Collection consists of 6 plug-ins, each of which is designed to handle a specific production task:

- JJP Vocals
- JJP Drums
- JJP Bass
- JJP Guitars
- JJP Cymbals & Percussion
- JJP Strings & Keys
1.3 Components

WaveShell technology enables us to split Waves processors into smaller plug-ins, which we call components. Having a choice of components for a particular processor gives you the flexibility to choose the configuration best suited to your material.

The Waves JJP Bass has three components:

- JJP Bass Mono – Mono in to Mono out component
- JJP Bass m>s – Mono in to Stereo out component
- JJP Bass Stereo – Stereo in to Stereo out component

1.4 A Few Words from JJP

"Every track is different. And every bass track is different. Sometimes you want just a great bottom; other times you want something with more mid-range that cuts through a mix. You may want to give it a bit of distortion, give it an edge. Or you'll want to shape the sound with some nice bell EQs, use some compression and gate to lock it with the kick drum. I could even see someone using this plug-in on the drums of a hip hop track as a sub enhancer, to give it some attitude. JJP Bass is a plug-in that could be used in any situation."
Chapter 2 – Quickstart Guide

- Insert the JJP Bass plug-in on the track you wish to process.
- Choose the Bass Type: DI, Amp, or Synth.
- Adjust the Sensitivity control until you achieve proper (yellow) levels, as indicated by the Sensitivity LED.
- Adjust the various Main Section controls located below the Sensitivity knob to shape your sound.
- Use the Center Section faders to adjust the sonic color.
- If the Clip LED lights up repeatedly or stays lit, lower the Output level fader accordingly.

JJP has optimized the default settings for each Type. These settings may or may not require additional adjustment once optimal Sensitivity has been achieved.
Chapter 3 – Controls, Concepts, and Terminology

Types
The JJP Bass plug-in includes three Types to address a range of source materials: DI, Amp, and Synth.
Sensitivity Section
The Sensitivity LED’s 3 colors indicate when appropriate levels are reached:

- LED Off (too low)
- Green (good)
- Yellow (optimal)
- Red (very hot)

Turn the Sensitivity Control until the LED lights up. For best results, use the section of your track with the highest peaks.

Main Section
The Main Section gives you control over basic dynamics & EQ. All processing is influenced by this section. The JJP Bass plug-in also includes an Input level control and Phase reversal switch.

Main Fader
The Main Fader controls the Main Section direct level.

Center Section Faders
The Center Section faders represent auxiliary returns with additional processing, sent from the main section pre-fader. Above each fader, there is a dedicated mute button. It may help to think of each plug-in as a mini-mixing console.

Please note: Certain faders may change, depending on the selected Type. This is intentional, and represents the actual processing JJP uses for that source or instrument.

Master Fader
The Master fader controls the master output signal level.
**Meter Section**

The Meter switch toggles meter monitoring between input and output modes. The Clip LED lights up when levels reach 0 dBFS; click to reset.

**Signal Flow**

![Signal Flow Diagram]

**WaveSystem Toolbar**

Use the bar at the top of the plugin to save and load presets, compare settings, undo and redo steps, and resize the plugin. To learn more, click the icon at the upper-right corner of the window and open the WaveSystem Guide.
