Chapter 1 – Introduction

1.1 Welcome
Thank you for choosing Waves! In order to get the most out of your new Waves plugin, please take a moment to read this user guide.

To install software and manage your licenses, you need to have a free Waves account. Sign up at www.waves.com. With a Waves account you can keep track of your products, renew your Waves Update Plan, participate in bonus programs, and keep up to date with important information.

We suggest that you become familiar with the Waves Support pages: www.waves.com/support. There are technical articles about installation, troubleshooting, specifications, and more. Plus, you’ll find company contact information and Waves Support news.

1.2 Product Overview
The Waves Signature Series is our exclusive line of application-specific audio processors, created in collaboration with the world’s top producers, engineers, and mixing engineers. Every Signature Series plug-in has been precision-crafted to capture the artist’s distinct sound and production style. For experienced and aspiring audio professionals alike, the Waves Signature Series allows you to dial up the sound you’re looking for quickly, without interrupting the creative flow.

The JJP Collection consists of 6 plug-ins, each of which is designed to handle a specific production task:
- JJP Vocals
- JJP Drums
- JJP Bass
- JJP Guitars
- JJP Cymbals & Percussion
- JJP Strings & Keys
1.3 Components

WaveShell technology enables us to split Waves processors into smaller plug-ins, which we call **components**. Having a choice of components for a particular processor gives you the flexibility to choose the configuration best suited to your material.

The Waves JJP Vocals plug-in has two components:

- JJP Vocals m>s – Mono in to Stereo out component
- JJP Vocals Stereo – Stereo in to Stereo out component

1.4 A Few Words from JJP

"When I mix a vocal, my approach is intuitive and instinctive, not technical. I don’t think in terms of ‘which delay’ or ‘how to EQ it’ or ‘more compression’ or whatever. What concerns me is how it makes you feel. And since each singer is unique, and every song is unique, there’s no single way to go about it. Is it personal, is it intimate, or is it loud and aggressive? So I do whatever it takes to make sure the vocal is open, sits well in the mix and, most importantly, helps convey the message of the song. **JJP Vocals** helps get you there."
Chapter 2 – Quickstart Guide

- Insert the **JJP Vocals** plug-in on the track you wish to process.
- Choose the vocal Type according to your source: Male, Male 2, or Female.
- Adjust the Sensitivity control until you achieve proper (yellow) levels, as indicated by the Sensitivity LED.
- Adjust the various Main Section controls located below the Sensitivity knob to shape your sound.
- Use the Center Section faders to adjust the sonic color.
- If the Clip LED lights up repeatedly or stays lit, lower the Output level fader accordingly.

JJP has optimized the default settings for each Type. These settings may or may not require additional adjustment once optimal Sensitivity has been achieved.
Chapter 3 – Controls, Concepts, and Terminology

Types
The JJP Vocals plug-in includes three Types to address a range of source materials: Male, Male 2, and Female.
Sensitivity Section

The Sensitivity LED’s 3 colors indicate when appropriate levels are reached:

- LED Off (too low)
- Green (good)
- Yellow (optimal)
- Red (very hot)

Turn the Sensitivity Control until the LED lights up. For best results, use the section of your track with the highest peaks.

In most cases, the Sensitivity LED indicates that your levels hit the processor in a way that will give you the intended output result. However, it’s important to keep in mind that optimal results for your source material may be achieved even when the Sensitivity LED does not display “optimal” levels (yellow). As always, trust your ears.

Main Section

The Main Section gives you control over basic dynamics & EQ. All processing is influenced by this section.

Main Fader

The Main Fader controls the Main Section direct level.

Center Section Faders

The Center Section faders represent auxiliary returns with additional processing, sent from the Main Section, pre-fader. Above each fader, there is a dedicated mute button. It may help to think of each plug-in as a mini-mixing console.

Please note: Certain faders may change, depending on the selected Type. This is intentional, and represents the actual processing JJP uses for that source or instrument.
**Master Fader**
The Master fader controls the master output signal level.

**Meter Section**
The Meter switch toggles meter monitoring between input and output modes. The Clip LED lights up when levels reach 0 dBFS; click to reset.

**Signal Flow**

![Signal Flow Diagram]

**WaveSystem Toolbar**
Use the bar at the top of the plugin to save and load presets, compare settings, undo and redo steps, and resize the plugin. To learn more, click the icon at the upper-right corner of the window and open the WaveSystem Guide.
