Chapter 1 – Introduction

1.1 Welcome

Thank you for choosing Waves! In order to get the most out of your Waves processor, please take the time to read through this manual.

In conjunction, we also suggest that you become familiar with www.wavesupport.net. There you will find an extensive Answer Base, the latest Tech Specs, detailed Installation guides, new Software Updates, and current information on Authorization and Registration.

By signing up at www.wavesupport.net, you will receive personalized information on your registered products, reminders when updates are available, and information on your authorization status.

1.2 Product Overview

The Waves Signature Series is our exclusive line of application-specific audio processors, created in collaboration with the world’s top producers, engineers, and mixing engineers. Every Signature Series plugin has been precision-crafted to capture the artist’s distinct sound and production style. For experienced and aspiring audio professionals alike, the Waves Signature Series allows you to dial up the sound you’re looking for quickly, without interrupting your creative flow.

Four-time GRAMMY® award-winning mixing engineer Manny Marroquin takes the Waves Signature Series to a new level with six hybrid plugins that bring his unique workflow to your studio. Alongside his personalized versions of tried-and-true favorites like EQ, reverb, delay and distortion, Manny introduces the innovative new Tone Shaper and Triple D plugins which are destined to become mixing essentials as well. Combining inspiration from his impressive collection of unique and boutique hardware, together with the fruits of his imagination, the Manny Marroquin Signature Series gives you direct access to the same tools Manny uses to mix hit after hit after hit.
The Manny Marroquin Signature Series consists of six plugins:

- **Manny Marroquin EQ** – A four-band equalizer, with each cutoff point inspired by a different hardware unit that Manny uses for that range.
- **Manny Marroquin Reverb** – 18 of Manny’s favorite reverbs in one plugin, topped off with a bit of EQ, compression, phasing and distortion.
- **Manny Marroquin Delay** – A delay plus multi-effect plugin with phaser, reverb, distortion and harmonizer for enhanced depth and groove.
- **Manny Marroquin Distortion** – A delicious, crunchy-style distortion for those times when you need to get down and dirty.
- **Manny Marroquin Triple D** – 3 “Ds” (DeEsser, DeHarsher, DeBoxy) that make it easy to remove those unpleasant – even painful – frequencies.
- **Manny Marroquin Tone Shaper** – Parallel compression per four frequency ranges plus EQ and ‘secret ingredients’ for added body and richness.

### 1.3 Concepts, Terminology & Interface
1. **Direct Section**
   Direct refers to the direct (input) signal.

2. **Bands Level Section**
   Low/Lo Mid/Hi Mid/High refer to the bands to which you can apply processing. Processed bands will be added to the direct signal, unless you turn the direct signal off.

3. **Bands In/Out Section** allows the muting of individual bands.

4. **Bands Type Section**
   The knobs numbered 1-2-3 refer to the three frequency ranges per band; 1 is lowest, 3 is the highest. Each type has a different shape, giving it its own unique character.

5. **Width Section** includes level and bypass controls.

*Signal Flow*
1.4 A Few Words from Manny Marroquin

“Parallel compression plays a huge part in my mixing technique. It adds richness and really brings out the full character of almost any sound and helps different elements stand out within a mix. The Tone Shaper is a parallel compressor with four separate bands plus EQ and a few other ‘secret ingredients’ that make it quick and easy to change the tonality of a track to match your mix. I’ve found that when a mix is like 80% there, instead of EQ or volume, adding the Tone Shaper makes things jump out, without sacrificing space in the mix.”

1.5 Components

WaveShell technology enables us to split Waves processors into smaller plugins, which we call components. Having a choice of components for a particular processor gives you the flexibility to choose the configuration best suited to your material.

The Waves Manny Marroquin Tone Shaper plugin has two components:

- MannyM Tone Shaper – Mono
- MannyM Tone Shaper – Stereo
Chapter 2 – Controls

**INPUT** controls the level into the plugin.
Range: -18 – 18 dB

**DIRECT** controls the level of the direct (input) signal, post send to parallel processing.
Range: -50 – 50

**DIRECT IN/OUT** mutes the direct signal from the output. When the direct signal is muted, only the processed signal is heard.
Range: In, Out

**LOW** controls the level of the low frequency range of the parallel process.
Range: 0 – 100
**LOW IN/OUT** mutes the Low section signal path, removing it from the output. *(See signal flow diagram)*
Range: In, Out

**LOW TYPE** selects the specific low frequency range.
Range: 1, 2, 3 (1 = lowest, 3 = highest)

**LO MID** controls the level of the low mid frequency range of the parallel process.
Range: 0 – 100

**LO MID IN/OUT** mutes the Lo Mid section signal path, removing it from the output. *(See signal flow diagram)*
Range: In, Out

**LO MID TYPE** selects the specific low mid frequency range.
Range: 1, 2, 3 (1 = lowest, 3 = highest)

**HI MID** controls the level of the high mid frequency range of the parallel process.
Range: 0 – 100

**HI MID IN/OUT** mutes the Hi section signal path, removing it from the output. *(See signal flow diagram)*
Range: In, Out

**HI MID TYPE** selects the specific high mid frequency range.
Range: 1, 2, 3 (1 = lowest, 3 = highest)

**HIGH** controls the level of the high frequency range of the parallel process.
Range: 0 – 100

**HIGH IN/OUT** mutes the Hi Mid section signal path, removing it from the output. *(See signal flow diagram)*
Range: In, Out
**HIGH TYPE** selects the specific high frequency range.
Range: 1, 2, 3 (1 = lowest, 3 = highest)

**WIDTH** receives pre-fader input from the low mid, high mid and high parallel paths, widening the stereo image of the signal it receives. *(Stereo component only)*
Range: 0 – 100

**WIDTH IN/OUT** allows the Width effect to be bypassed. *(See signal flow diagram)*
Range: In, Out

**OUTPUT** controls the plugin output level.
Range: -18 – 18 dB
Chapter 3 – The WaveSystem

3.1 The WaveSystem Toolbar

All Waves processors feature the WaveSystem toolbar which takes care of most administrative functions you will encounter while working with your Waves software. The features of the WaveSystem toolbar are the same on practically all Waves processors, so familiarity with its features will be helpful whichever processor you are using.

Toolbar Functions

- **Undo**
  Undoes the last 32 actions.

- **Redo**
  Redoes the last 32 undone actions.

- **Setup A/B**
  Toggles between two presets. This is useful for close comparison of different parameter settings.

- **Copy A->B**
  Copies the current settings to the second preset register.

- **Load**
  Recalls presets from file.

- **Save**
  Saves presets in the Waves file formats.

- **?**
  Opens the manual for the processor you are using.

3.2 Preset Handling

**Preset Types**

- **Factory Presets** are permanent presets in the Load menu. Factory presets cannot be over-written or deleted. When applicable, different component plugins may have different factory presets.

- **User Presets** are your favorite settings of the plugin saved as a preset in the Load menu, under ‘User Presets’. User Presets can be over-written and deleted.

- **Setup Files** may contain more than one preset. For example, a single file can contain all the presets for a session. When you open a Setup File, all its setups become part of your Load pop-up menu for fast access. This can be particularly useful with multiple
instances of a plugin in a single session. By saving all the settings you create into a single Setup File, they can all be quickly available for every instance of that plugin.

Loading Presets and Setups

Click-and-hold on the Load button to see the Load pop-up menu. The menu is divided into four sections. If a section is not currently available it will not appear in the Load pop-up menu.

Open Preset File… Select to open any setup or preset file, whether from the Library or your own creations.
‘Filename.xps’ Displays any currently loaded Setup File and its presets.
Factory Presets: Displays the default Factory Presets.
User Presets: Displays any loaded User Presets.

Saving Presets and Setups

Click-and-hold on the Save button to see the Save pop-up menu. Four options are available. If an option is not currently available it will be grayed out and inaccessible.

Save to New File… Select this to start a new Setup file. There are two prompts - first for the setup filename, then for the preset name. You must provide a name for both the setup file and the preset. Click OK (ENTER) to complete the save. It is a good idea to create a folder in which to save several setup files for a project.

Save ‘File Name’ – “Preset Name” Overwrites the settings of the loaded preset (whether a User Preset or a preset from a Setup File) with the current settings. If a Setup File is currently loaded, the name of the Setup File is displayed followed by the name of the preset itself. If a User Preset is loaded, its name is displayed.
Save to ‘File Name’ As… Saves the current settings as a new preset into the Setup file that is open (if one is not open, the option is grayed out). You will be prompted to give the preset a name.

Put into Preset Menu As… Save the current settings into a User Preset that will always be in your Load menu (until deleted). You will be prompted to give this preset a name. User Presets are stored in the plugin’s preference file.

Deleting Presets
You may delete User Presets and presets within a Setup File. Factory Presets and Setup Library files cannot be deleted or overwritten.

1. Hold the Command (Mac)/Control (PC) key down.
2. Click-and-hold the Load button to see the pop-up menu.
3. While still holding the Command/Control key, select the preset or setup to delete.
4. A confirmation box will appear, allowing you to cancel or ‘OK’ the deletion.

A/B Comparison and Copying
The Setup A/Setup B button may be clicked to compare two settings. If you load a preset in the Setup B position, this will not affect the preset loaded into the Setup A position, and vice-versa.

If you want to slightly modify the settings in Setup A, you can copy them to Setup B by clicking on the Copy to B button, then alter Setup A and compare with the original Setup B.

The name of the current setup will be shown in the title bar (on platforms which support it), and will switch as you change from Setup A to Setup B.

Note: an asterisk will be added to the preset name when a change is made to the preset.
3.3 Interface Controls

Controls can be in one of three states:

- **Not Selected** where the control is not the target of any user entry
- **Selected** where the control is the target of mouse control entry only
- **Selected and Active** where the control is the target for both mouse and keyboard entry

Toggle Buttons

Toggle buttons display the state of a control, and allow switching between two or more states. **Single-click** to change the control’s state. Some toggle buttons have a text display which updates with the current setting, and others (bypass, solo, or monitoring toggles) illuminate when the control is active.

Some processors have **link buttons** between a pair of toggle buttons, allowing click-and-drag adjustment while retaining the offset between the controls.

Value Window Buttons

Value windows display the value of a control and allow **click-and-drag** adjustment, or **direct control via the keyboard**.

- **Using the mouse**, click-and-drag on the value window to adjust. Some value windows support left/right, some up/down (as you hover over a button, arrows will appear to let you know which direction of movement that button supports).
- **Using the arrow keys**, click once with mouse to select the button, and then use up/down – left/right (depending on the direction supported by that button) to move in the smallest incremental steps across the button’s range (holding down the arrow keys will move faster through the range).
- **Using key entry**, double click on the button to open the value window, and directly enter the value from your keyboard. If you enter an out of range number, the button stays selected but remains at the current setting (system beeps? If system sounds are on?)
Some processors have link buttons between a pair of value windows, allowing click-and-drag adjustment while retaining the offset between the controls.

**Sliders**
Click on the slider itself or anywhere within the sliders track. The numerical value of the slider settings is displayed in a hover window above the slider path.

**Hover Box**
Hovering boxes will appear and display the control value when hovering with the mouse over the control.

**TAB Functions**
TAB moves the ‘selected’ status to the next control, with shift-TAB moving in the reverse direction.

Additionally, the Mac has an option-TAB function for ‘down’ movement and shift-option-TAB for ‘up’ movement where applicable.

If you have several Value Window Buttons selected, TAB functions will take you through the selected controls only.

### 3.4 Waves Preferences (Pro Tools only)

When launching Pro Tools, hold Shift to view the Waves plugin Preferences window.

The following options are available:
- Don’t use AudioSuite plugins
- Don’t use RTAS plugins
- Rescan all plugins
- HUI control surface support (low resolution)
- Enable single-click text entry
